SUMMARY

A VLSI engineering student with hands-on experience in digital systems design, verification, and system integration, backed by exposure to requirements decomposition and functional analysis through real project implementations. Complements technical depth with a creative edge in visual design and branding, and brings proven skills in team leadership, event management, and cross-functional coordination. Driven by a parallel interest in entrepreneurship, venture strategy, and financial markets.

EDUCATION

Nitte Meenakshi Institute of Technology <i>Bachelor of Engineering, Electronics – VLSI Design & Technology</i> <i>CGPA: 8.76</i>	Bengaluru, Karnataka 2023 – 2027
Base PU College <i>Class XII – PCMC</i> <i>Percentage: 94.75%</i>	Bengaluru, Karnataka 2021 – 2023
Sindhi High School <i>Class X – CBSE</i> <i>Percentage: 91.20%</i>	Bengaluru, Karnataka 2021

TECHNICAL SKILLS

Languages & Methodologies: Verilog HDL, SystemVerilog, UVM, C, C++, Python, HTML, Embedded C
Tools: Cadence, Vivado, Solidworks, Figma, Canva, Adobe Illustrator, Arduino IDE, MS Office (Word, Excel, PowerPoint)

PROJECTS

Bitcoin Mining Accelerator | *SystemVerilog, FPGA*

- Designed a modular hardware accelerator implementing the SHA256d algorithm on FPGA, applying system architecture principles to decompose the design into 7 integrated modules with defined interfaces and functional requirements.
- Developed and tested a pipelined dual SHA256 engine with parallel processing cores, validating system performance through functional verification and iterative debugging across the full development lifecycle.

2-Channel DMA Controller | *Verilog, SystemVerilog, UVM*

- Developed a dual-channel DMA controller with AHB-Lite bus interface, performing functional and logical decomposition of system requirements into modular RTL architecture with clearly defined interfaces.
- Built a UVM verification environment with RAL-based configuration and constrained-random test generation, achieving 100% scoreboard pass rate across all transfer scenarios with 0 errors in 4-word burst transfers completing in 545ns.

Rain-Sensing Auto Windshield Wiper | *ESP32, Arduino IDE, Embedded C*

- Designed and integrated an automated wiper system using ESP32 and a rain sensor, defining system performance requirements and implementing 4 operational states to meet real-world functional needs.
- Developed and tested servo-based wiper control logic, validating end-to-end system behaviour with live serial diagnostics and achieving a 250ms response cycle under maximum load conditions.

LEADERSHIP & ACHIEVEMENTS

Enigma E-Cell, NMIT <i>Vice President</i>	Bengaluru, Karnataka 2025 – Present
---	--

- Led cross-functional entrepreneurial initiatives across a 75+ member team organised into specialised sub-systems, coordinating operations, defining team workflows, and enabling data-driven decision making for organisational goals.
- Headed Enfinity 2025, NMIT's flagship startup festival, managing end-to-end operations across 6+ events including pitching competitions, panel discussions, and networking sessions, drawing 1000+ attendees from across Bangalore.
- Hosted Ideathon 7.0 with 100+ participants across 27 teams, running parallel ideation and prototype tracks to drive student-led innovation.

National Entrepreneurship Competitions & Events

- Winner in stock trading competition held in Tech Solstice '26 held in MIT Bangalore.
- Emerge 25 Boardroom Winners – IIT Hyderabad Emerge
- Startup Mahakumbh 2024 Top 20 Teams

Vortex – VLSI Club, NMIT

<i>Design Lead</i>	Jun 2025 – Mar 2026
--------------------	---------------------

- Led visual design for the club, leveraging Canva and Figma to create posts, brochures, and promotional content that effectively communicated technical initiatives to a wider audience.

Team Arion, NMIT

<i>Design Team Member</i>	Dec 2024 – Apr 2025
---------------------------	---------------------

- Curated end-to-end visual content ranging from technical brochures to Instagram posts using Canva and Figma, maintaining consistent branding across all team communications.

CERTIFICATIONS

Pro Python Bootcamp – Udemy
FPGA Certificate – TOR VERGATA University
Discovering Entrepreneurship – Cisco Networking Academy (Oct 2025)
Industry 4.0 and 3D Printing
