Beyond the Price War: Ownly's Blueprint for Winning Food Delivery

Team Futurepreneur

How can Ownly establish a strong foothold in a duopoly market where customers are loyal to incumbents, margins are tight, and new entrants risk being overwhelmed by dominant rivals?

OUR VISION

Ownly by Rapido is a bold move: trying not to play exactly the same game as Swiggy/Zomato but undercut them on cost through a different commission/delivery-fee model, leveraging its existing rider infrastructure, targeting affordability, and appealing both to cost-sensitive consumers and restaurants.

Ownly is the **zero-commission** food delivery app from Rapido, **leveraging our efficient fleet to deliver structurally cheaper prices and better restaurant margins.**

Rapido Backbone

- 10M+ riders across 1,000+ cities
- Instant logistics reach and reliability
- No new infrastructure needed

Hyperlocal Trust Advantage

- Use trusted local riders
- Build community-backed delivery
- Promote local partner identity

Trusted Mobility Brand

- Strong local presence and trust
- High brand recall among users
- “Delivered by Rapido” as a reliability badge

Zomato and Swiggy dominate Indian food delivery through scale, aggressive discounts, and deeply embedded loyalty programmes. Entering this market requires **redefining the rules**, not repeating them. **Ownly leverages Rapido's existing strength** to create a new category – **hyperlocal, trusted, and sustainable.**

10M+

Active Riders

Instant delivery scale

1000+

Cities Covered

Pan-India presence

4km

Avg Delivery Radius

Hyperlocal efficiency

Market Positioning and Community Differentiation

Phase 1 – Deep Urban Pilot

Start in high-density metro clusters — Koramangala, HSR, BTM (Bengaluru)

Faster deliveries

Stronger visibility

Better unit economics

Phase 2 – Underserved Towns

Expand to Tier-2 & Tier-3 local hubs where competition is low.

Higher loyalty

Lower competition

Early market ownership

THE LOCAL IDENTITY ADVANTAGE

Local & Personal

Meals come from familiar neighborhood kitchens, prepared by local cooks who understand regional tastes – food that feels personal and comforting, not mass-produced.

Affordable & Daily-Use

Home-style meals under ₹120 make Ownly relevant to students, office workers, and families, offering affordable, everyday meals without compromising on taste.

Hard to Replicate

Deep community relationships and localized menus give Ownly a defensible niche that Zomato and Swiggy can't easily copy.

Trust

Delivered by Rapido riders you already know

Community

Supporting home chefs and local kitchens

Affordability

Meal boxes under ₹120, transparent pricing

Local kitchens. Trusted riders. India's neighborhood food network.

Chief Financial Officer

What money model allows Ownly to pay its riders fairly, support restaurants, and still move toward profit—without playing the same loss-heavy game Zomato and Swiggy are stuck in?

A **dual-stream revenue model** ensures sustainable growth and a clear path to profit, without playing the loss-heavy game Zomato and Swiggy are stuck in.

- **B2B Restaurant Subscriptions:** Our primary profit driver is a predictable, high-margin subscription model for restaurants. This Monthly Recurring Revenue (MRR) covers all fixed operational costs, ensuring a stable financial foundation. We'll launch affordable monthly subscription based meal plans which is appealing to hostel students, working professionals etc.

- **B2C Delivery Fees:** Every delivery is unit-profitable. Dynamic, customer-paid fees cover all variable costs (e.g., rider payouts), meaning order growth directly translates to profit and funds our expansion.

- **Combined Advantage:** Unlike competitors who burn cash, our dual-revenue model is profitable by design. Stable B2B profits allow us to optimize logistics and marketing, while self-sustaining B2C operations enable scalable growth.

How much should Rapido be willing to invest in branding and discounts before Ownly becomes too risky to fund further?

Rapido's investment limit against Ownly shouldn't be a fixed budget, rather a strategic breaking point. It requires a Strategic Pivot from costly price wars to sustainable value.

In the end, until Ownly is directly harming the core business of its parent company, Rapido's wisest course of action is not a price war. Instead, it should experiment to find a strategy that benefits both Rapido and Ownly, utilizing its **large fleet of Rapido riders** to act as the **primary logistics and delivery partner for Ownly's operations**.

What protective steps can Ownly take if Zomato and Swiggy respond with brutal discounts or exclusivity deals, trying to shut it out?

Customer Strategy

Attract conscious consumers by positioning our fair model against the industry's 25-30% "commission tax."

Build loyalty with a curated selection of quality restaurants and a guaranteed on-time delivery rate, focusing on reliability over discounts.

Capture the student market by prioritizing a wide selection of budget-friendly meals under ₹120.

Partner Strategy

Offer restaurants a 30%+ reduction in fees compared to unsustainable, commission-based models.

Empower partners with full data ownership and flexible, no-lock-in contracts.

Market Entry Strategy

Restaurants are not allowed to inflate prices on Ownly, with menu prices matching dine-in rates.

Target isolated universities to create a delivery-ride synergy. After delivering food, riders can immediately offer Rapido rides to students leaving campus, which maximizes rider efficiency and reduces idle time.

Chief Marketing Officer

Ownly's brand story can be framed as a **community-driven, hyperlocal food movement** that celebrates local eateries, empowers students and professionals with **affordable, reward-based dining**, and builds **authentic emotional connections** through honest storytelling, gamified loyalty, and **Rapido's trusted network**; redefining convenience with culture, not just competition.

Total Addressable Market

Entire online delivery market, **~72M users**.
₹2,64,000 crore/year market size

Serviceable Addressable Market

Focused metro + value segment, **~56M users**.
₹32,300 crore/year market size

Target Market

Core Ownly target, **~2.8–6.7M highly engaged users**.
₹9,700 – ₹38,800 crore/year market size

01

Build trust through authenticity: Showcase real local eateries and user stories to counter the rivals' polished image.

Impactful Affordability: Ownly targets value-driven youth with budget meals and student rewards that deliver genuine, practical worth.

02

03

Rapido synergy: Leveraging Rapido's network boosts visibility and trust at minimal cost.

Student Loyalty: Registered students get six free monthly deliveries, building lasting loyalty and inclusivity.

04

05

Real over Reel: Use micro-influencers and student ambassadors to celebrate everyday India, not just advertise

Rethinking Loyalty: Rewards That Truly Matter, Beyond Elite Tiers

Subscriptions drive consistent use; Rapido's ecosystem amplifies visibility and trust, offering meaningful, practical retention.

Everyday Perks: Ownly focuses on daily utility with student discounts and meal subscriptions, skipping elite loyalty.

Useful Loyalty: Rewards link to daily needs and local food, making loyalty relevant, not just aspirational.

FUN FACT:

Just as Swiggy is reportedly selling its massive stake (12%) in Rapido, a new app named 'Toing' suddenly appears to compete directly with Rapido's new Ownly platform.

Talk about interesting timing!

GO-TO-MARKET

Phase 2: Early User Acquisition

Phase 1: Market Validation

Phase 4: Loyalty & Retention

Phase 3: Scale in tier 2 / 3 Cities & Community building

Phase 5: Optimization & Defense

As COO, I've always believed that speed and reliability aren't achieved by spending more, they come from designing smarter systems.

Current Gap:

Today, food delivery platforms struggle with idle drivers, inefficient routing, and shrinking margins. The further a delivery goes, the more costly it becomes because the return trip earns nothing.

Ownly's Advantage through Rapido:

Integration with Rapido's 10M+ ride network converts up to 30–40% of return trips into ride opportunities, boosting captain utilization by 25% and cutting delivery cost per order by 20%.

How Can Ownly Design its Delivery Process to Be Consistently Faster and More Reliable, Without Ballooning Costs?

Zone Domination

Micro-Market Density: Strictly limit service to 2–3 km zones (e.g., college areas). Expand only after the existing zone hits X orders per Captain per hour.

Dynamic Order Throttling: Dispatch engine rejects orders pushing predicted Cost Per Order (CPO) above fixed-fee ceiling.

Cost Control

Mandatory Kitchen Ready-Time SLAs: Enforce compliance at restaurants. Predictive AI displays only those ready to dispatch.

Time Management

Should Ownly First Dominate in Smaller Towns Before Battling in Metros?

Phase 1:

Prove the Economics

- (Metro Micro-Niches) Start in dense, price sensitive zones (e.g., university areas in Bangalore).
- Validate the Delivery-to-Ride Handoff in real competition.
- Prove profitability without city-wide capacity.

Phase 2:

Build the Volume Moat

- (Tier 2/3 Domination)
- Low competition: Capture 70–80% share among local restaurants fast.
 - Rapido brand advantage: Leverage existing mobility dominance.
 - Lower costs: Reduce payouts & overhead → predictable profits from fixed-fee model

Phase 3:

Surgical Metro Attack

- Re-enter metros with the perfected Tier 2/3 playbook.
- Target ₹150–₹250 meal segment where rivals' high-commission model collapses.
- Win by forcing strategic retreat, not by burning cash.

Attacking metros directly is a cash-burning ego war against entrenched duopolies. Our strategy: build a financially defensible position where our low-cost model thrives naturally.

Chief Operating Officer

Single Earning Per Minute (EPM): Unified Captain dashboard prioritizes next best job (ride or food) based on hourly income potential.

Predictive Handoff Engine: AI assigns Ownly orders to Captains whose destination (e.g., college gate) is a high-demand pickup point for an immediate Rapido ride.

Dynamic Service Lockout: Captains with low delivery or ride quality scores are auto-locked out from the Ownly module.

Zero Dead Mileage: Food delivery acts as repositioning for the next high-margin ride → ultra-low CPO.

—— As the Chief Technology Officer at Ownly, my role is to shape how technology powers our business growth. ——

AI Integration

AI driven analytics can access customer behavior, buyers pattern; optimizing stock level and streamlining warehouse management for better efficiency and customer satisfaction.

Tech-Powered Sustainability

Ownly can use Ethereum Layer 2 solutions for a "Web3 as a Service" model, radically cutting backend costs while integrating verifiable features like transparent supply chains and secure merchant compliance.

Social media platforms conversion rate in 2024

Product Integration

Implement an intuitive chatbot ordering system on popular social media, like IRCTC, to effortlessly guide users through simple prompts, ensuring a seamless experience.

While others built food apps to maximize orders, we're building Ownly to maximize trust and loyalty.

Smart Chat-Bot

Don't know what to eat? Ask Ownly AI (The smart way to discover and decide what to eat)
Also suggest alternative like tofu for paneer, etc.
Integration of AI driven personalized dietician within app.

Customer Experience

Utilize cost-effective alternatives of Google Maps like Mapbox, OpenStreetMap, or HERE for real-time traffic updates and precise order tracking, ensuring users monitor deliveries accurately and boosting satisfaction.

Predictive Dispatch

Enhance logistics with Predictive Dispatch and Smart Multi-Order Batching to boost Captain earnings, lower costs, and reduce delivery delays by analyzing real-time demand.

That's what makes our technology different — it's not just smarter, it's human.

CONCLUSION

Ownly leverages Rapido's trusted riders and brand presence to enter India's food delivery market. By piloting in dense urban clusters, expanding to underserved towns, and partnering with local kitchens and home chefs, it creates a personal, community-driven identity. Affordable, convenient, and authentic, Ownly is set to redefine local food delivery beyond discounts and scale.
